

Benchmarking of Low-Complexity Region Detection Tools

Automatically Generated Benchmark Report

Dataset: arabidopsis

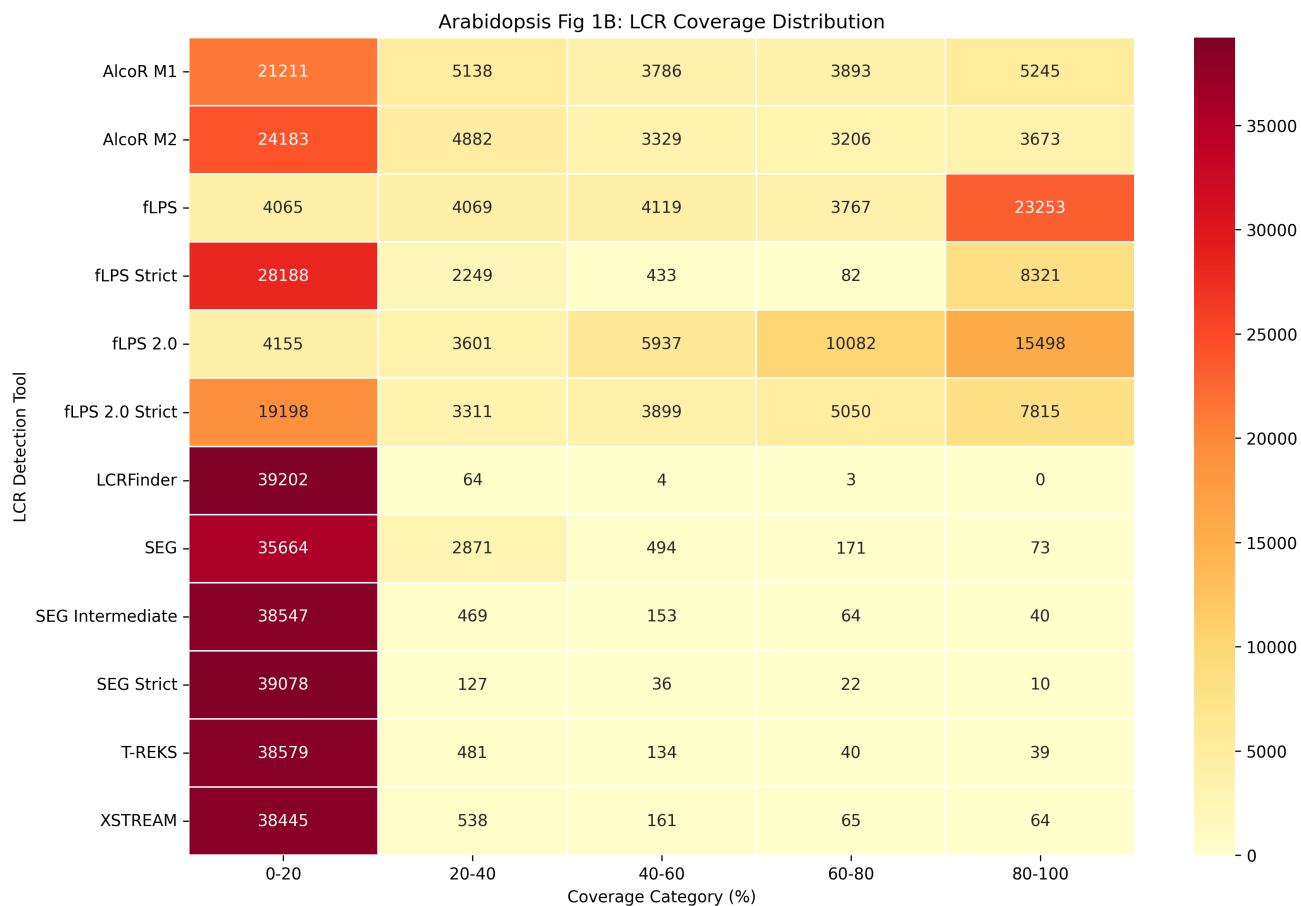

Project Folder: C:\Users\91892\Documents\Project_LCR\arabidopsis

Comparative summary of Low-Complexity Regions

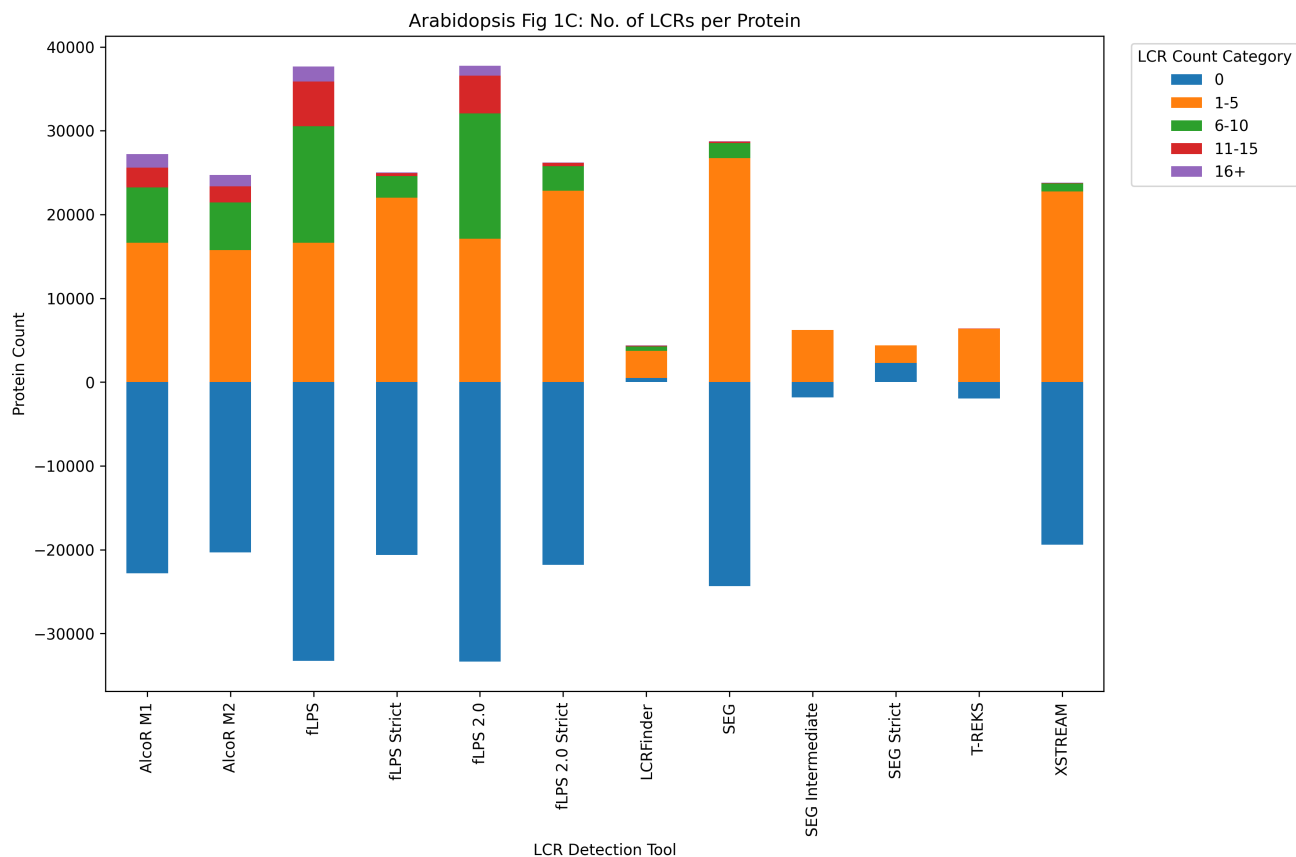

Illustrates a comparative summary of Low-Complexity Regions (LCRs) identified by various computational techniques.

Comparative summary of Low-Complexity Regions

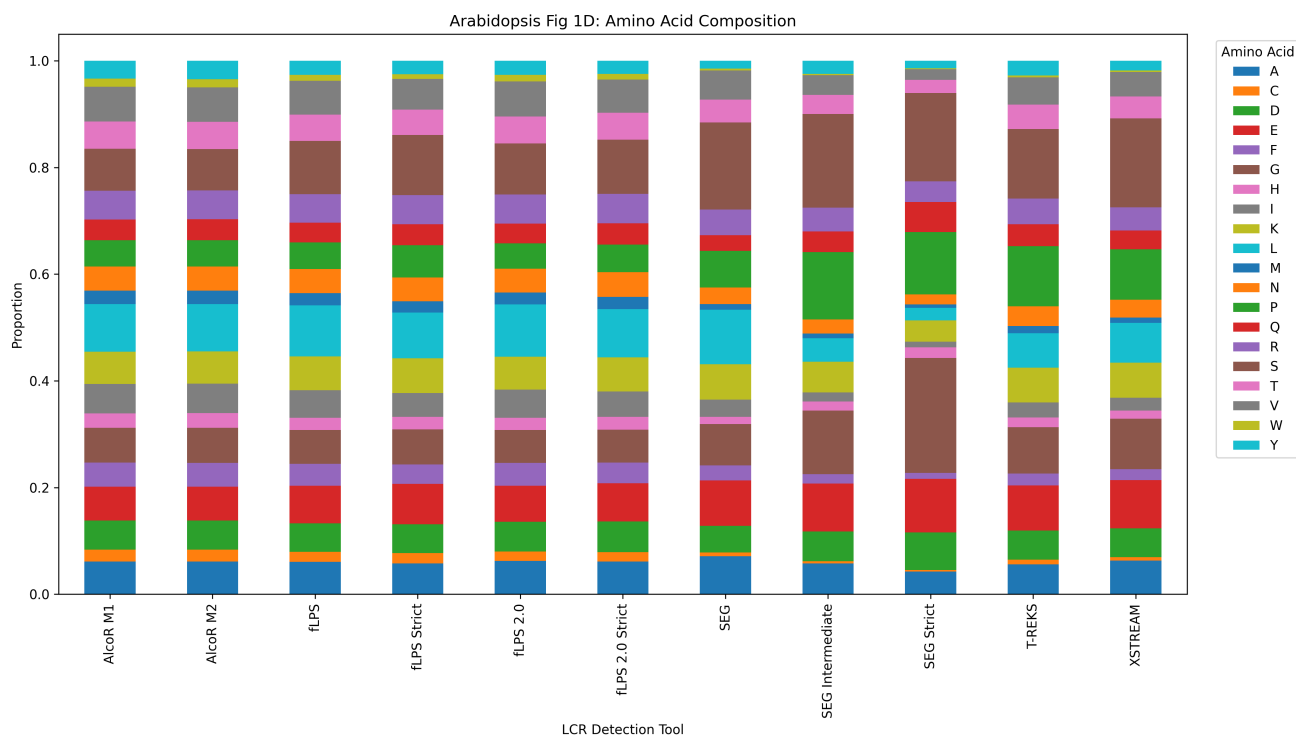

Illustrates a comparative summary of Low-Complexity Regions (LCRs) identified by various computational techniques.

Comparative summary of Low-Complexity Regions

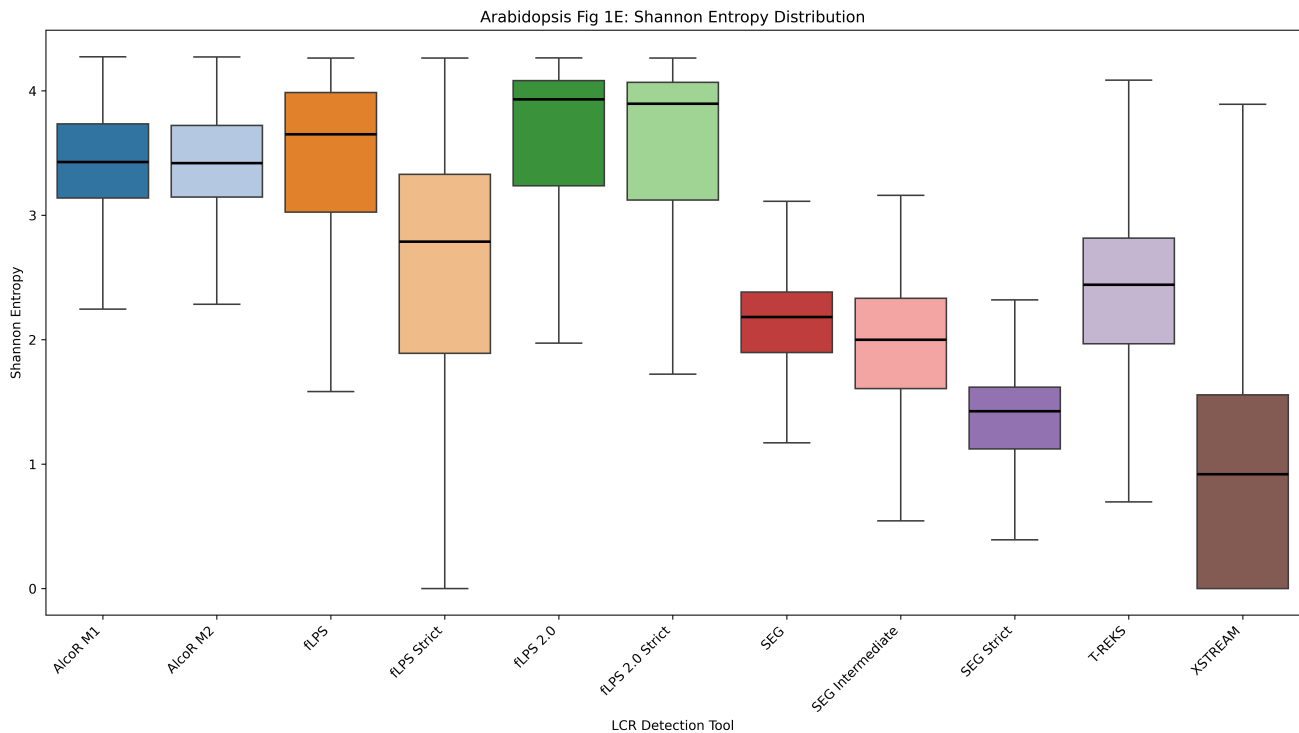

Illustrates a comparative summary of Low-Complexity Regions (LCRs) identified by various computational techniques.

Comparative summary of Low-Complexity Regions

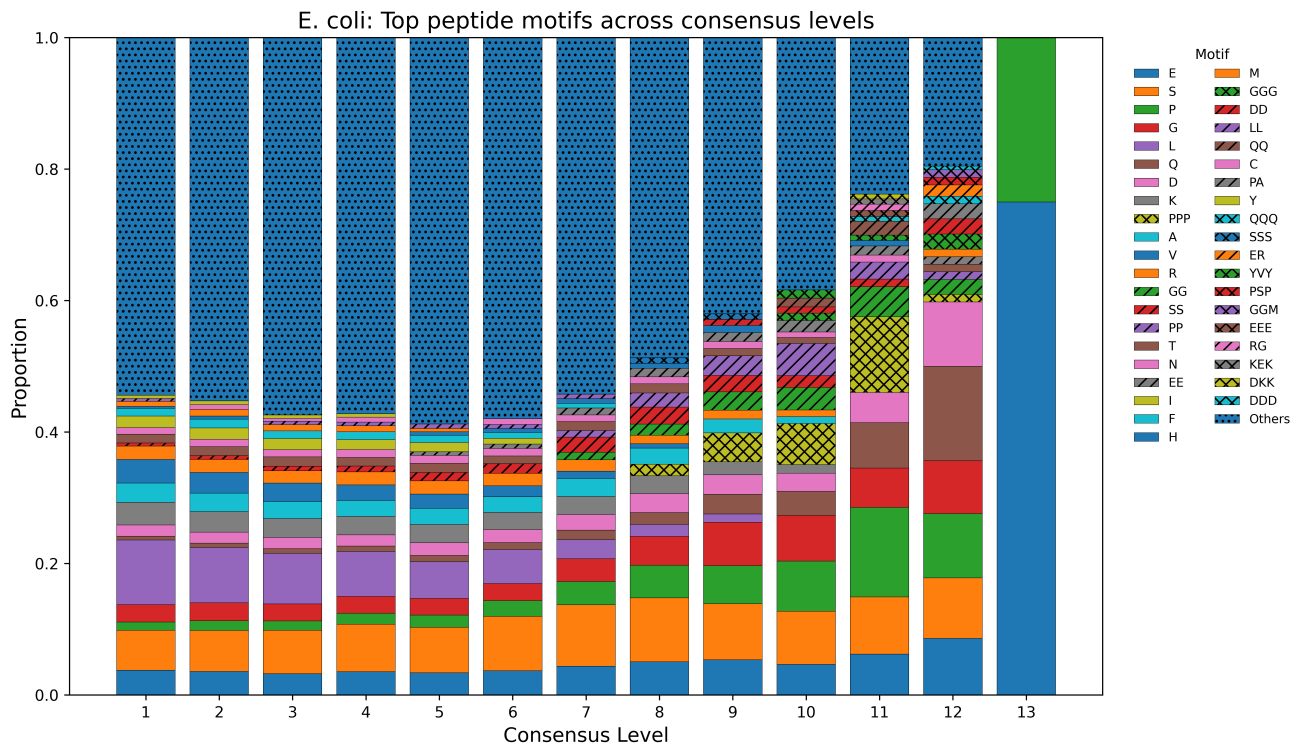

Illustrates a comparative summary of Low-Complexity Regions (LCRs) identified by various computational techniques.

Comparative summary of Low-Complexity Regions

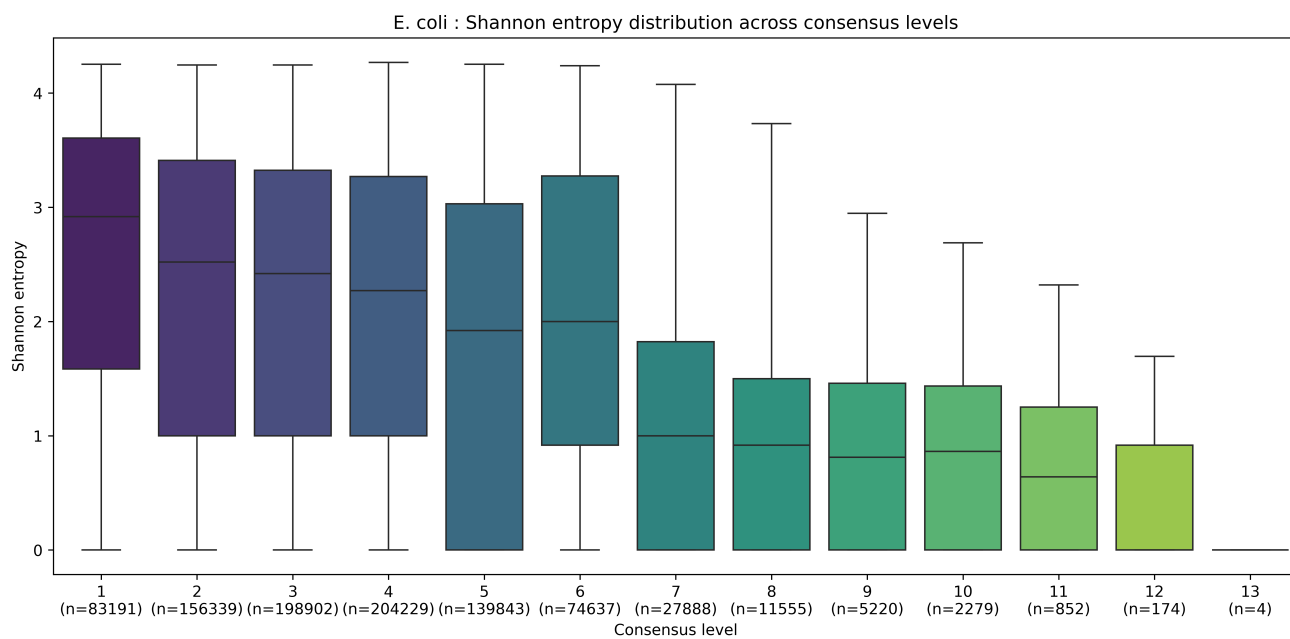

Illustrates a comparative summary of Low-Complexity Regions (LCRs) identified by various computational techniques.

FIGURE 2A

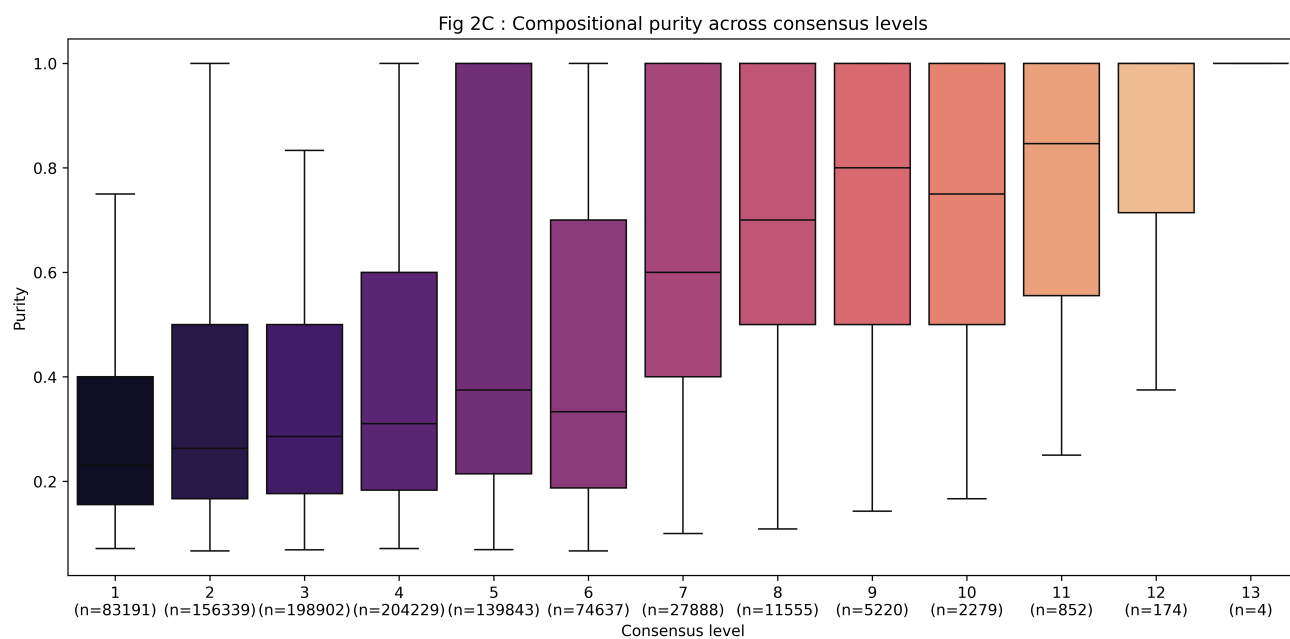

Shows peptide motif contributions across consensus levels.

FIGURE 2B

Depicts Shannon entropy across consensus groups.

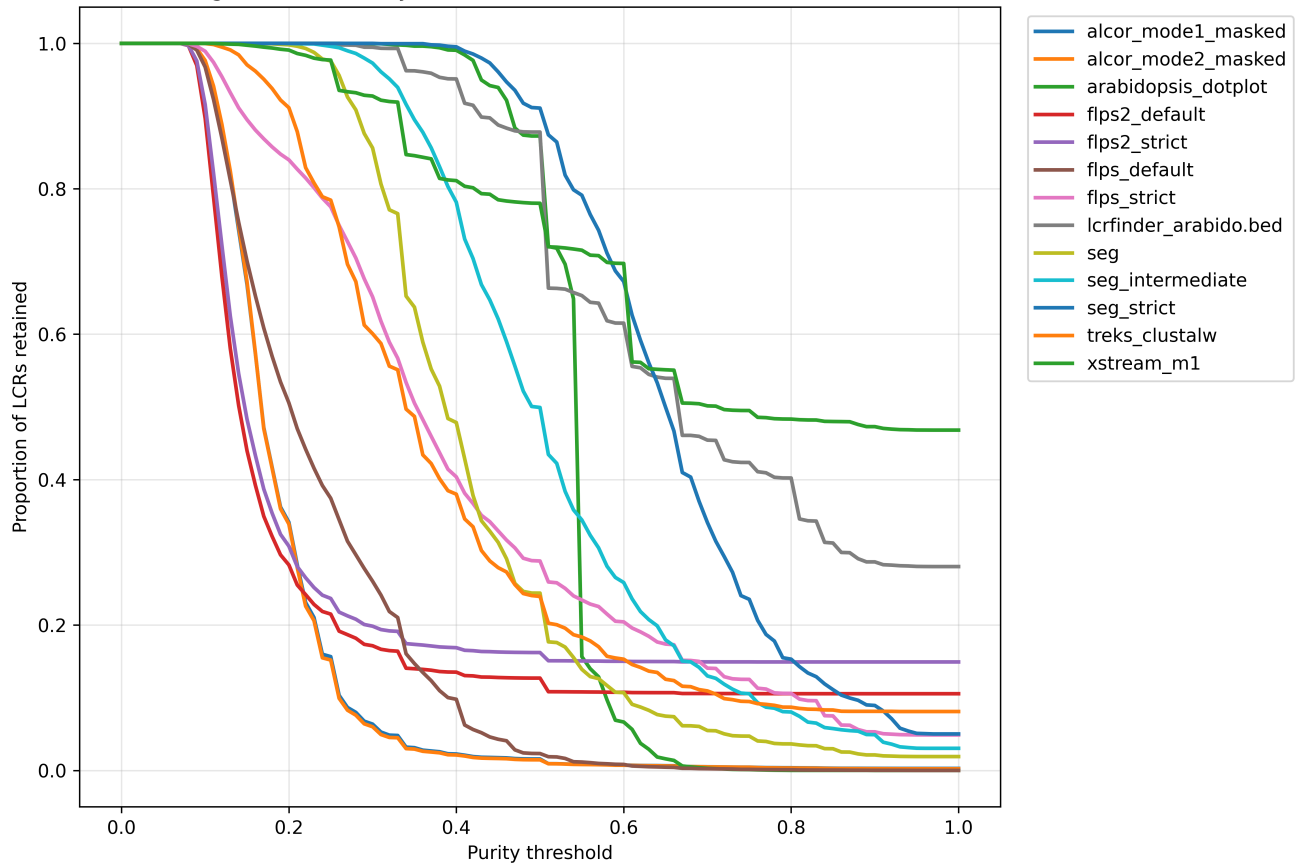

FIGURE 2C

Depicts compositional purity across consensus groups.

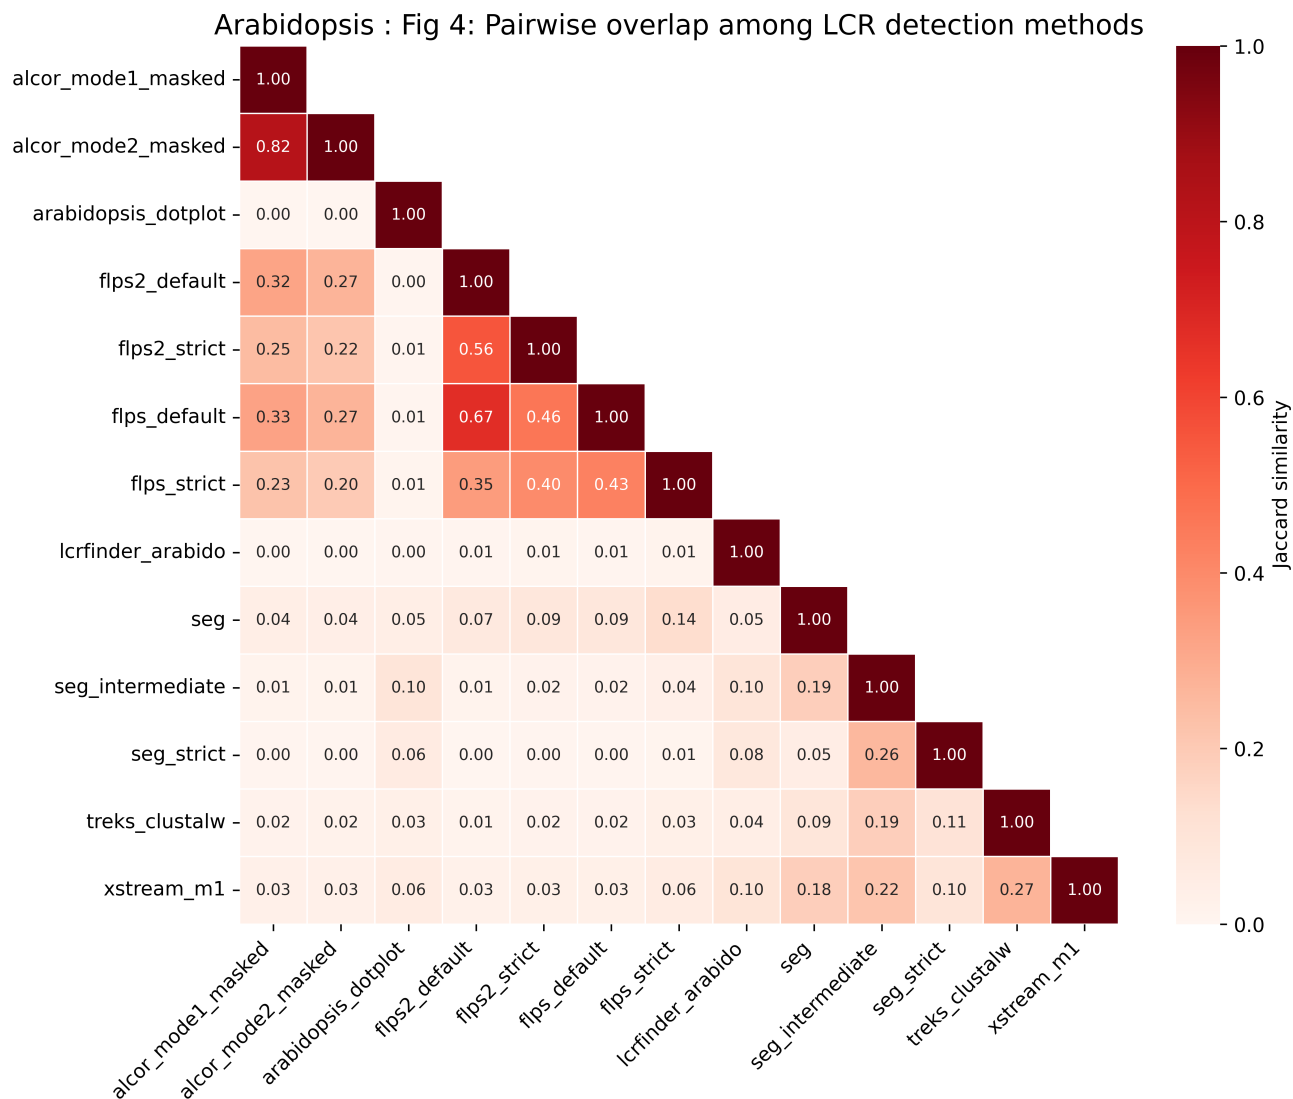

FIGURE 3

Fig 3: E. coli : Purity distribution across LCR detection methods

Purity distribution of LCRs detected by different computational methods.

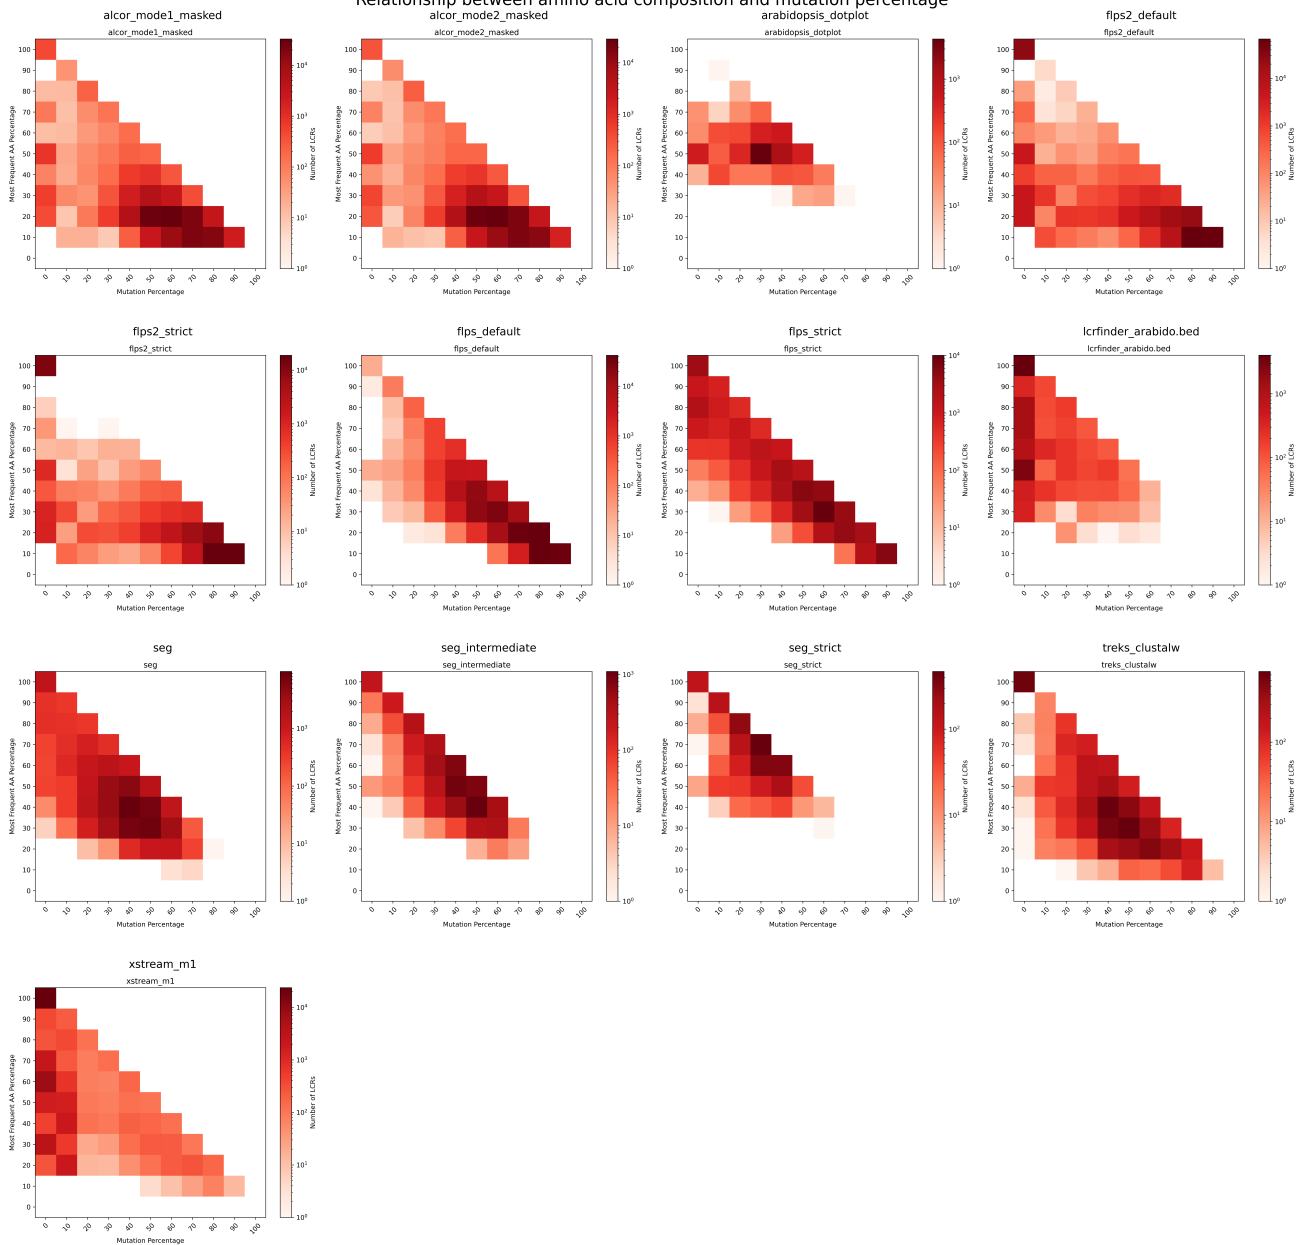

FIGURE 4

Pairwise overlap and similarity between LCR detection methods.

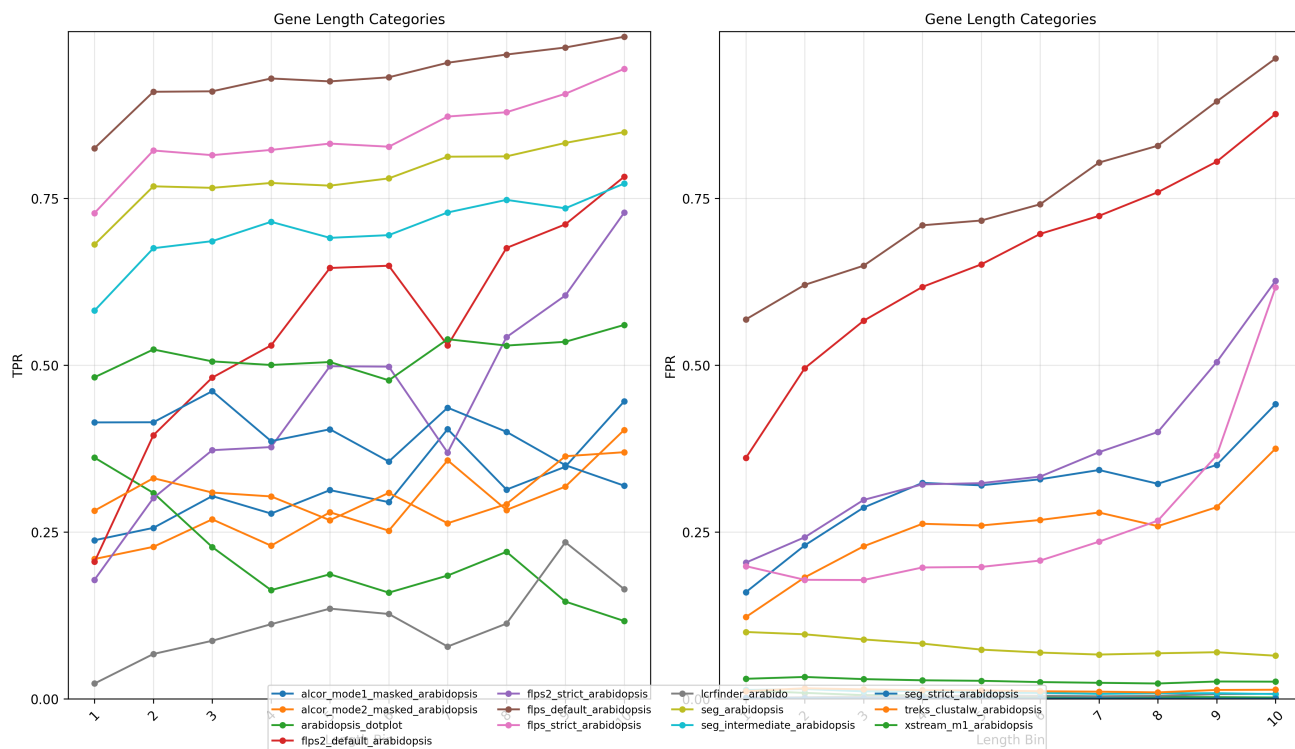

FIGURE 5

Relationship between amino acid composition and mutation percentage

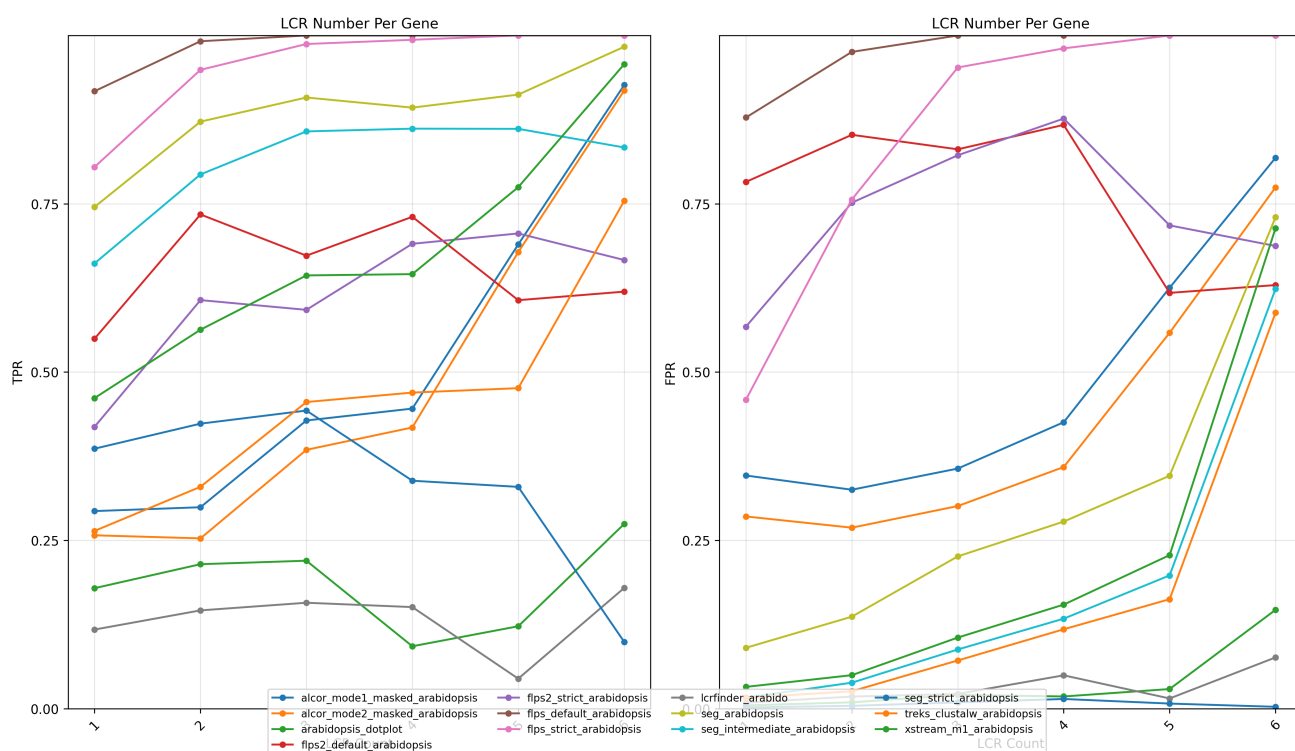

Relationship between amino acid composition and mutation percentage.

FIGURE 6A

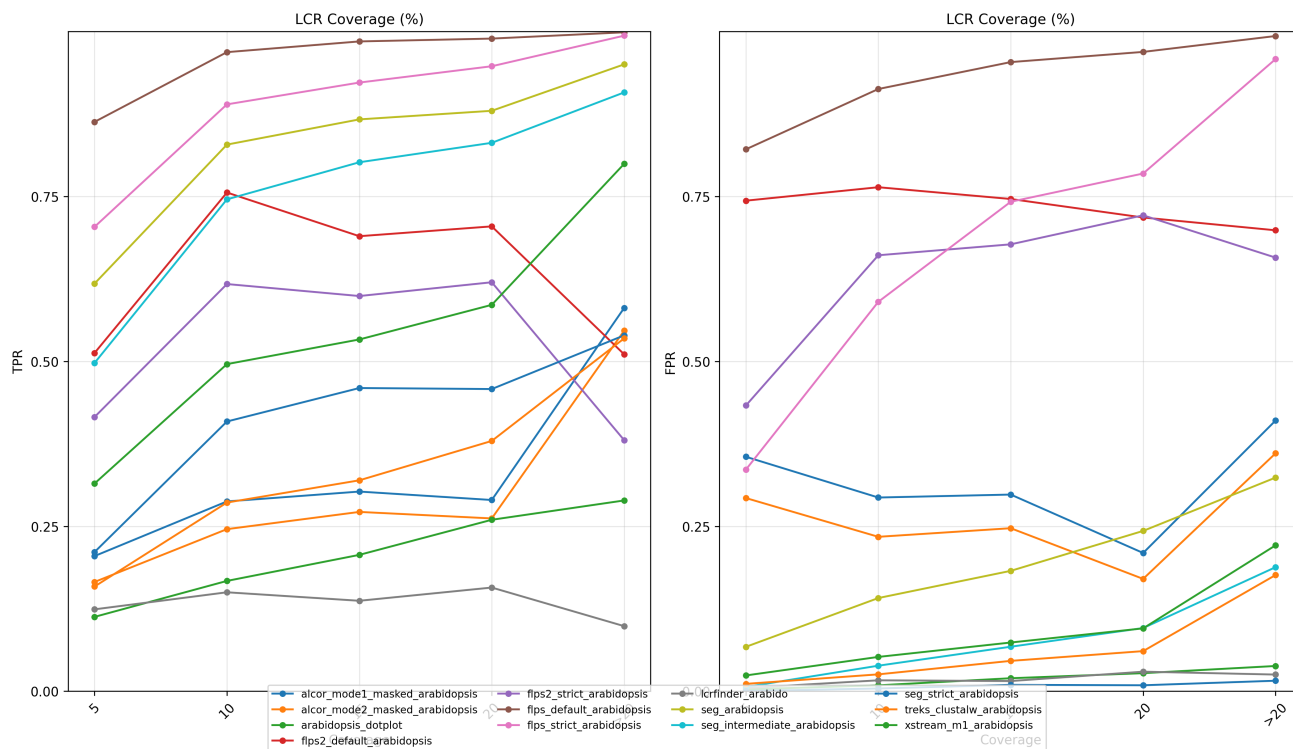

Gene length categories.

FIGURE 6B

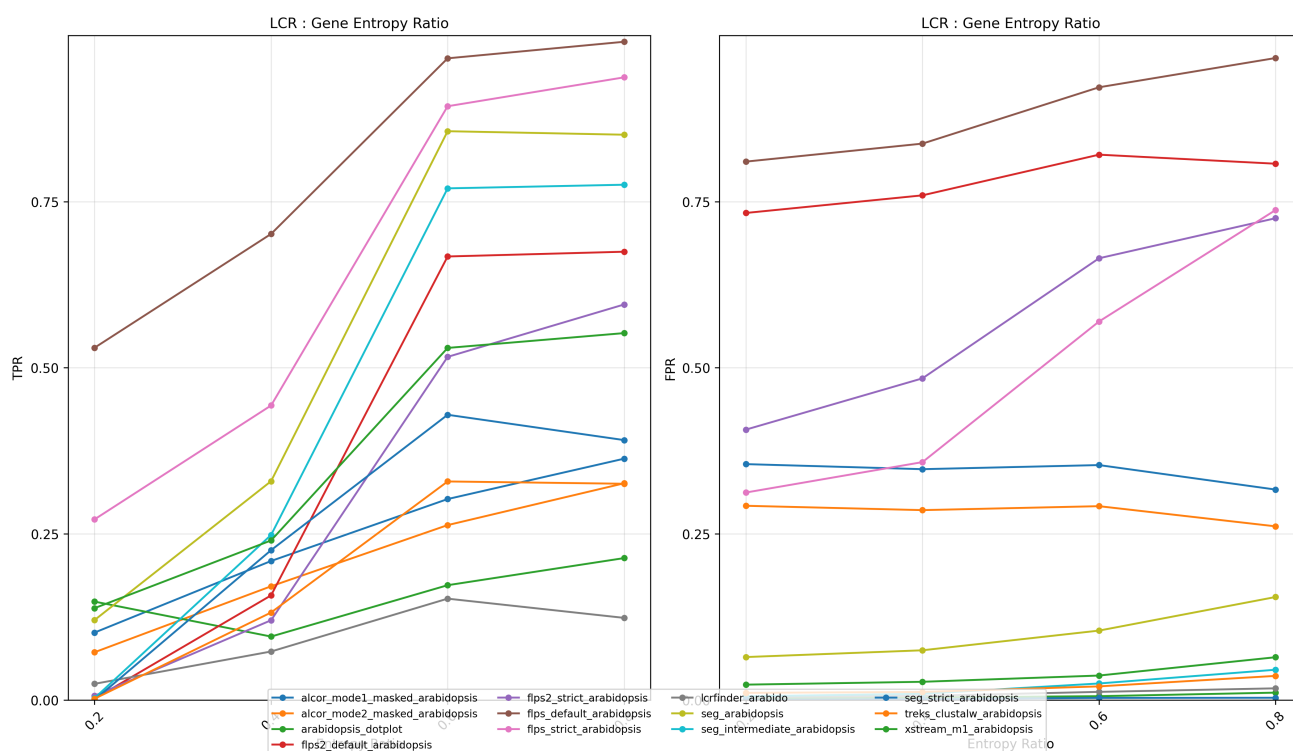

Number of LCRs per gene.

FIGURE 6C

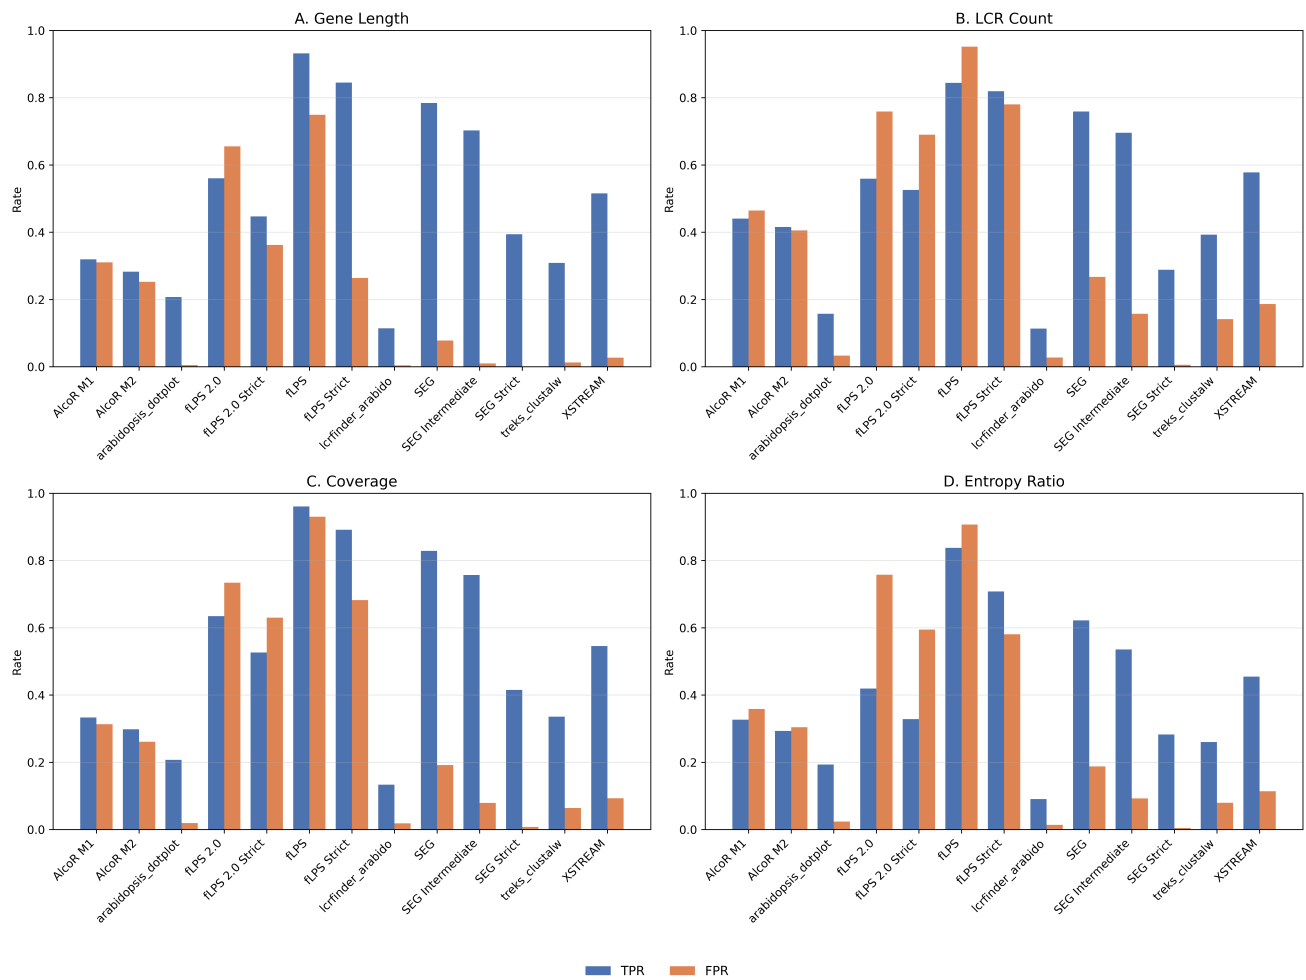

LCR coverage percentage.

FIGURE 6D

LCR-to-gene entropy ratio.

FIGURE 7

Summary of benchmarking results.
